## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Berroth et al. 2004/0056617.

Berroth et al. discloses a method of controlling an electronically commutated motor 20. Control system of the motor 20 comprising, with respect to claims 1 and 8:

- A rotor 22 and stator windings 24 and 26;
- Current flowing in the stator windings commutated via transistors 30 and 32;
- A microcontroller 27 supplies signal S31 at output 83 and signal S33 at output 85. Signals 83 and 85 control transistors 30 and 32, (see [0047]);

Art Unit: 2837

- The magnitude of the fluctuation (ripple) of signal  $U_c$  in Fig. 7d can be set by selecting capacitor 76 of Fig. 6, (see [0053]).

With respect to claims 2 and 7, claimed “pinch-off” current is shown in Fig. 8d.

With respect to claim 3, Berroth et al. show in Fig. 4 control transistor 66.

With respect to claim 4, voltage divider presented as combination of resistors 70 and 72 that allows to onset of the current through transistor 66, (see [0051]).

With respect to claims 5 and 8, transistor 66 is connected to the microcontroller 27 exerting control signal to control transistor 66.
